Task: Cut the Steak into Thick Slices with a Steak Knife

Models Involved:

Models Involved:

1. **Descriptive Models**:
   - Break tasks into subtasks: Detect -> Grip -> Align -> Slice.
   - Example: Ensures logical task decomposition.

2. **Predictive Models**:
   - Estimate time and force required for slicing.
   - Example: Predicts optimal knife force for thick slices.

3. **Cognitive Models**:
   - Ensure precision and uniform slicing.
   - Example: Guarantees thick, consistent slices.

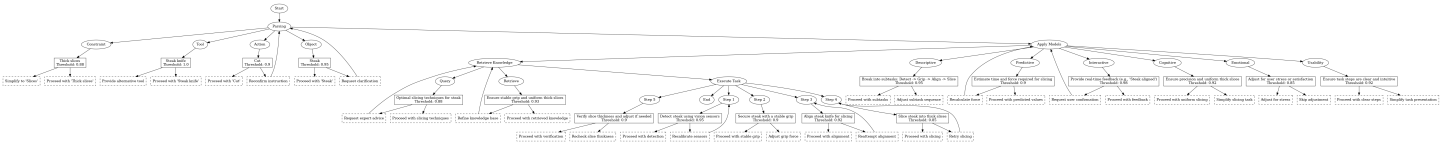
4. **Interactive Models**:
   - Provide real-time feedback during execution.
   - Example: Alerts like "Steak aligned" or "Slicing complete".

5. **Emotional Models**:
   - Adjust for user satisfaction or stress.
   - Example: Adapts slicing pace to reduce stress.

6. **Usability Models**:
   - Ensure clarity and intuitiveness in task execution.

- Example: Simplifies slicing steps for better understanding.

Process Flowchart:



Detailed Explanation of Steps

1. **Parsing**:
   - **Action**: 'Cut' (Threshold: 0.9)
     - Outcome: Proceed with 'Cut' or reconfirm instruction if confidence is low.
   - **Object**: 'Steak' (Threshold: 0.95)
     - Outcome: Proceed with 'Steak' or request clarification if detection fails.
   - **Constraint**: 'Thick slices' (Threshold: 0.88)
     - Outcome: Proceed with 'Thick slices' or simplify to 'Slices'.
   - **Tool**: 'Steak knife' (Threshold: 1.0)
     - Outcome: Proceed with 'Steak knife' or provide an alternative tool.

2. **Apply Models**:

   - **Descriptive**: Break the task into subtasks: Detect -> Grip -> Align -> Slice.

   - **Predictive**: Estimate the time and force required for slicing.

   - **Cognitive**: Ensure precision and alignment with user intent.

   - **Interactive**: Provide real-time updates like "Steak detected".

   - **Emotional**: Adjust for user satisfaction or stress during slicing.

   - **Usability**: Ensure clarity and intuitiveness in task execution.

3. **Retrieve Knowledge**:

   - Query relevant slicing techniques for steak.

   - Retrieve strategies for stable grip and uniform thick slicing.

4. **Execution Steps**:

   - **Step 1**: Detect the steak using vision sensors (Threshold: 0.95).

     - Outcome: Recalibrate sensors if detection fails.

   - **Step 2**: Secure the steak with a stable grip (Threshold: 0.9).

     - Outcome: Adjust grip force if necessary.

   - **Step 3**: Align the steak knife for slicing (Threshold: 0.92).

     - Outcome: Reattempt alignment if unsuccessful.

   - **Step 4**: Slice the steak into thick slices (Threshold: 0.85).

     - Outcome: Retry slicing if needed.

   - **Step 5**: Verify slice thickness and adjust if necessary (Threshold: 0.9).

     - Outcome: Recheck slice dimensions and retry if needed.
